Vox® Height Adjustable Table

Nienkämper

New electric height - adjustability feature now makes Vox® FlipTop™ tables even more accessible to a wider variety of uses. Go from sitting to standing in seconds for a flexible environment. The electric mechanism allows you to quickly and quietly adjust the height of the table from 29" to 52-½" while the two base columns stay perfectly in sync as they move up and down. Two power receptacles on the frame provides easy access power for charging any device.

Vox® FlipTop™ height-adjustable tables enable you to choose the most comfortable way to work. You can vary your position from sitting to standing allowing for a variety of postures throughout the day.

Vox® solves the problem of storable conference/meeting room tables by providing a complete solution for multi purpose rooms. Mobile furniture, while highly desirable, often doesn't compliment furniture in corporate spaces. Moreover, rising real estate costs have increased the need to optimize boardroom spaces for a variety of other functions.

The new height adjustable Vox® FlipTop™ Tables combines unique design with versatility to transform corporate spaces like board rooms into flexible meeting places. It is designed to integrate with an existing boardroom table collection for an appearance of permanence even though the tables can be moved easily on short notice.
